**Midcom****TITLE OF POSITION:** Innovation Engineer**REPORTS TO:** President

We are searching for a highly motivated electrical engineer with excellent technical background who is interested in developing the future. Someone who will find and collaborate with other innovators to design transformers for products not yet in the marketplace.

The task is simple: Develop the next generation of transformers. As a manufacturer of transformers for primarily telecom- and power-applications, we are on the search for the newest technology, the highest efficient core material and the latest winding technology. Basically we want to explore the boundaries of physics.

If you are a self starter, able to communicate with technical and non-technical people alike, be able to sell your idea and convince others of its value, be hands on, and willing to travel. We want you to excite and attract others and eventually lead an innovation team.

**EDUCATION:**

- BSEE is required
- Advanced degrees preferred
